POLYSTYRENE CUTTING SOLUTIONS

My name is Mikael Rødkjær. I would like to present the Polycut machine.

Polycut is a new polystyrene cutting machine. It is designed and produced in Denmark, and it is developed in cooperation with leading craftsmen from the Danish construction industry.

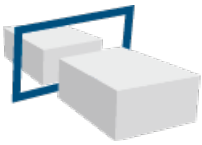

The Polycut machine is designed for the craftsman, who spends a lot of time cutting polystyrene. It is a durable and solid machine, and it is designed to be used. The machine is quick and easy to operate and the flexible table provides a good and steady support of the styrofoam/ polystyrene plate.

The fixed table, with measurement units on both sides of the cutting wire, makes it easy to measure the decided cut on the polystyrene.

The Polycut machine uses its own weight to cut through the polystyrene, thereby ensuring a uniform cut. This machine will never let you down.

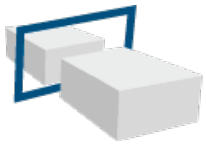

POLYCUT.DK
POLYSTYREN CUTTING SOLUTIONS

The Polycut machine is able to cut through 400mm polystyrene in approximately 30 seconds. With the Polycut machine you will experience a much easier and faster completion of your polystyrene cutting tasks. We offer a full spare parts program and service on the machine.

The polycut machine can be delivered with an extra adjustable tabletop, which allows you to cut the long side of the styrofoam plate in any desired angle. It's also possible to purchase an extra exhaust box for the already existing absorption.
